Chemical Dosing Pot

plumb-mate

Dosing Pot

To maintain the efficiency of closed-loop mechanical and hydraulic circuits, precise chemical dosing is required to neutralize risks such as oxidation, freezing, and biological growth. The plumb-mate 15-Litre Stainless Steel Dosing Pot provides a heavy-duty, convenient interface for

these treatments, allowing operators to introduce inhibitors and biocides without compromising system pressure. By facilitating consistent water quality, this dosing pot helps maintain the long-term reliability and thermal efficiency of the entire network

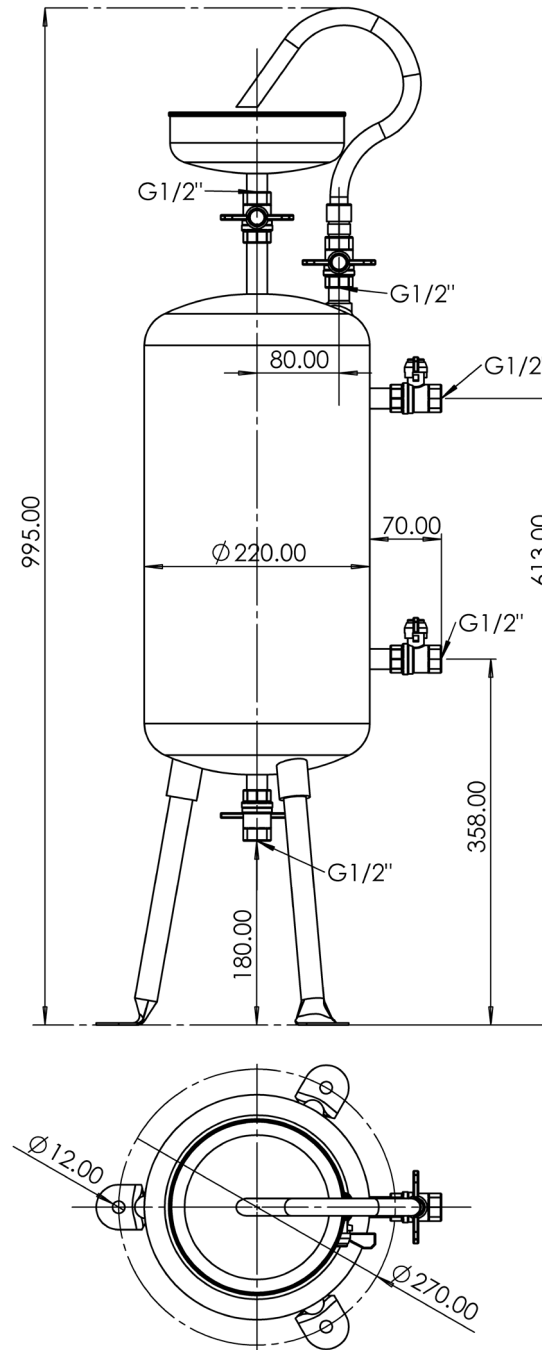

Key Features

Capacity

15 Litre Capacity

Material

SUS304 Stainless Steel Construction
